

Industrial Valve India

Solution for your industry's flow control problems

Check Valves

Angle Type Valves

Fire Safe Ball Valves

Industrial Butterfly Valves India

Stainless Steel Butterfly Valves

Check Valves

The main function to the check valves is to control the flow of substance and allow them to flow only in one direction. They have high abrasion resistance and are highly durable. These check valves are especially used in those industries that need the

flow to be in a single direction and avoid reverse flow. They have least maintenance cost and have great durability.

Angle Type Valves

The angle type valves are used in the industries when the flow of substance is to be directed at an angle of 90°. This is possible in the angle type valves because of the axis of the inlet and outlet that are inclined with each other at a horizontal angle. They are in weight. The valves that we provide have robust body and deliver a long life span.

Fire Safe Ball Valves

The ball valves are used in the industry to allow the liquid to flow only through a small hole that is in it and allow the fluid to flow only through that place. The **fire safe ball valves** are used in the industry when tight shut-off is required. They help in controlling the flow of highly inflammable fluids. We make these valves according to the industrial standards and even modify them as per the need of client.

Industrial Butterfly Valves India

Ashwathi
Controls Pvt. Ltd.
Customer satisfied, we are satisfied

The butterfly valves are used in wide range of industries to control the flow of any kind of fluid. The **industrial butterfly valves** are mostly preferred in the industries when they have to control the flow of liquid in pipes. The functioning of the valves can be customized to pneumatically and electrically operation. The dimension of the valves is kept very precise and has great tensile strength.

Stainless Steel Butterfly Valves

Ashwathi
Controls Pvt. Ltd.
Customer satisfied, we are satisfied

The butterfly valves we offer are available in different type of material that provides choice to the client to choose the most suitable valve for their application. The **stainless steel butterfly valves** are used in many industries for regulating the flow of liquid. The butterfly valves we provide have strong structure and are widely used in heady duty applications.
